CONTENTS

Exploring Students’ Multimodal Mobile Use as Support for School Assignments
by Lindell, Hrastinski and Skogh .......................................................... 2

Computational Statistics at High School – Calculating the Ellipse Area by the
Monte Carlo Method and Analyzing the Dice Poker Game of Chance
by Benacka .......................................................... 14

"Robots! – Introduction to Engineering and Computer Science"
by Love, Anderson and Barrett .......................................................... 23

Developing an Interactive Computer Program to Enhance Student Learning
of Dynamical Systems
by Howe and Barton .......................................................... 33

A Low-Cost Robot Positioning System for a First-Year Engineering
Cornerstone Design Project
by Frank, Witt, Hartle, Enders, Beiring and Freuler ......................... 41

Computational Pedagogy: Fostering a New Method of Teaching
by Yasar, Veronesi, Maliekal, Little, Vattana and Yeter ....................... 51

Student Dashboard for a Multi-Agent Approach for Academic Advising
by Perez and Gonzalez .......................................................... 73

Desktop Virtual Reality (VR) & iSpace For GIS Education Through
Interactive Virtual Learning Environments
by Chandramouli, Lei, Chou, Huang and Kolanuvada ......................... 91

Can We Teach A Programming Language as a Second Language?
by Sun, Frederick, Espejo and Cunningham ........................................ 105
