

Faith Forcucci – Bio

Faith Forcucci transferred to Cal Poly Pomona into the Mechanical Engineering B.S. program in the fall of 2014 and knew immediately she was going to be a part of the CPP Formula SAE team. In her first year she became the only female team member and presented in the Cost and Business Presentation events at Formula SAE Lincoln and Formula Student Germany. While attending these competitions, she was quick to analyze the differences between good teams, great teams, and excellent teams. This year Faith has taken on the role of Formula SAE President, and has successfully achieved the goals that she set out for this year including stronger team management, more diverse team structure, and increased financial support. As a result, the team was ahead of schedule and was able to have an unveiling event for sponsors, families, and friends of the team. Another area Faith strives to improve for the team is outreach opportunities. This year, she has given tours of the engineering student project laboratories to over 1000 students of all ages and participated in several outreach events on and off campus to encourage students of all background and genders to pursue an education in engineering. For Faith, being a member of the Cal Poly Pomona Formula SAE team is so much more than building an awesome racecar. This team allows students to apply engineering principles that are taught in the classroom to a hands-on project, communicate with sponsors all over the world, travel to international competitions, and learn every day from the most amazing team members. She is very excited to represent Cal Poly Pomona Formula SAE as well as women in engineering at this year's ASEE Conference.
